

Changes to the Montreal Protocol & the latest on the new Australian Standards 5149 & 817

As part of its mission and continued training programs, **Superior Training Centre** are delighted to offer to the HVACR industry an updated training session on the safe application and handling of Hydrocarbon (HC) Refrigerants.

Superior Training Centre is a registered training organization that was established in 2014 with an accredited RTO No. 41122. We specialise in providing technical training and programs toward qualifying individuals to become professional tradesmen in our areas of expertise such as Refrigeration/Air Conditioning, Electrical and metal fabrication.

This half day course will cover the following important topics:

- **Changes to the Montreal Protocol**
- **The latest updates in regards to the new Australian Standards 5149 & 817**
- **The relevant safety aspects of handling HC refrigerant during engineering, installation, service, maintenance and disposal**
- **An overview of HC system design and application.**
- **Renewable energy credits**

We look forward to having you with us on **Friday the 16th of December 2016, 10:00am-3:00pm at Bankstown Sports Club, Gillawarna Room.** This session will be offered at no cost on this particular day.

There will be time & opportunity for all of your questions on the day and experts in the field will also be available to answer your specific questions. For detailed information about this seminar, please contact Mike Nasser on 0414 397 978 or email mike on: mike@stc.nsw.edu.au
